Key Responsibilities & Expertise

- Analyze prescriptions for accuracy, appropriateness, and compliance with treatment guidelines.
- Participate in ward rounds in General Medicine and Intensive Care Units to provide medication-related recommendations.
- Conduct dose adjustments for patients with renal impairment or other special conditions.
- Audit prescriptions for correct dose, frequency, route, interactions, contraindications, and report non-compliance.
- Promote rational antibiotic use and monitor the administration of high-end antibiotics in wards and ICUs.
- Report and document adverse drug reactions (ADRs) to the Pharmacovigilance Programme of India (PvPI).
- Analyze medication errors, implement corrective actions, and establish preventive strategies as part of quality improvement initiatives.
- Inspect and ensure the proper maintenance of emergency crash carts in different hospital departments.
- Counsel patients on safe medication use, possible side effects, and provide clear discharge instructions in an understandable language.
- Provide accurate drug-related information and respond to clinical queries from doctors, nurses, and patients.
- Conduct training sessions for junior doctors, nurses, and pharmacists on medication management policies.
- Organize and support continuing medical education (CME) programs and hospital pharmacy conferences.
