Dr. Bagheri Clinic Mashhad, IRAN

1. Preparation of Equipments & Drugs : Set up anesthesia machines, breathing circuits, and monitoring systems prior to surgery. Ensure proper functioning of monitors, infusion pumps, and resuscitation equipments. Prepare anesthetic drugs and consumables according to protocol.
2. Intraoperative Support : Assist the anesthesiologist during induction, maintenance and emergence from anesthesia. Operate and adjust anesthesia delivery systems and vital signs monitoring. Assist with airway management including intubation and alternative airway devices.
3. Patient Monitoring & Safety : Continuously monitor vital signs and patient status during procedures. Document and report any significant changes to the anesthesiologist. Prepare and assist with emergency interventions such as CPR and defibrillation.
4. Infection Control & Safety Compliance : Adhere to strict infection control and sterilization protocols. Ensure safe disposal of medical waste. Comply with patient safety standards and hospital policies.
5. Post-Anesthesia Care (PACU/Recovery) : Transfer patients safely to the recovery unit and provide monitoring. Assist in managing post-operative pain, nausea, and vital signs-stabilization. Prepare patients for discharge or transfer to wards/ICU.
6. Inventory & Supply Management : Maintain stock of anesthetic drugs, airway devices, and consumables. Coordinate with the pharmacy and central supply to ensure availability.
7. Documentation & Reporting : Accurately record anesthetic procedures, medications, and events.
